

# Tapcrow API Integration for Website and Mobile applications

## Step 1: - Fetch Key and Token from the server

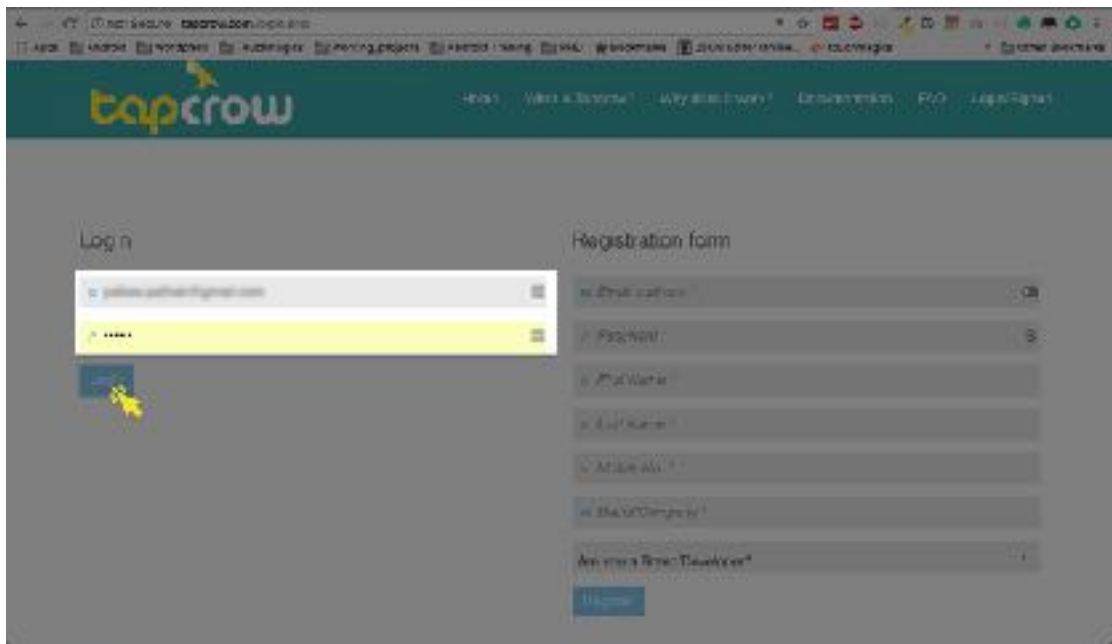

- a) Visit [www.tapcrow.com](http://www.tapcrow.com) and click on “login/Signup” at upper right corner.

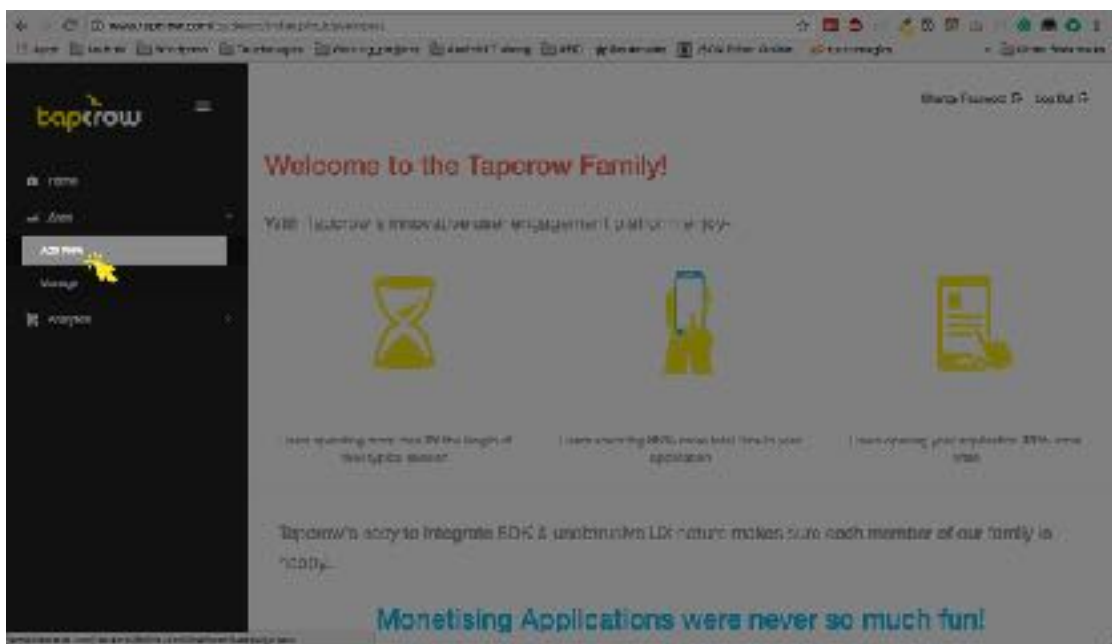

- b) If not registered already then fill out the registration form and click on Register button.

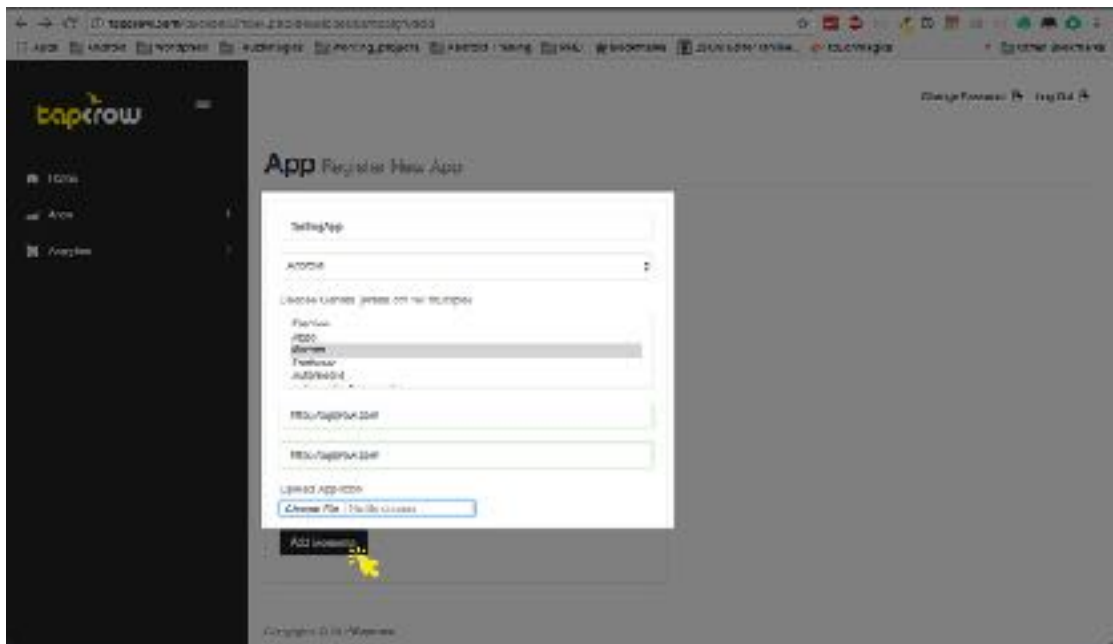

- c) Fill out the login credentials and click on login button

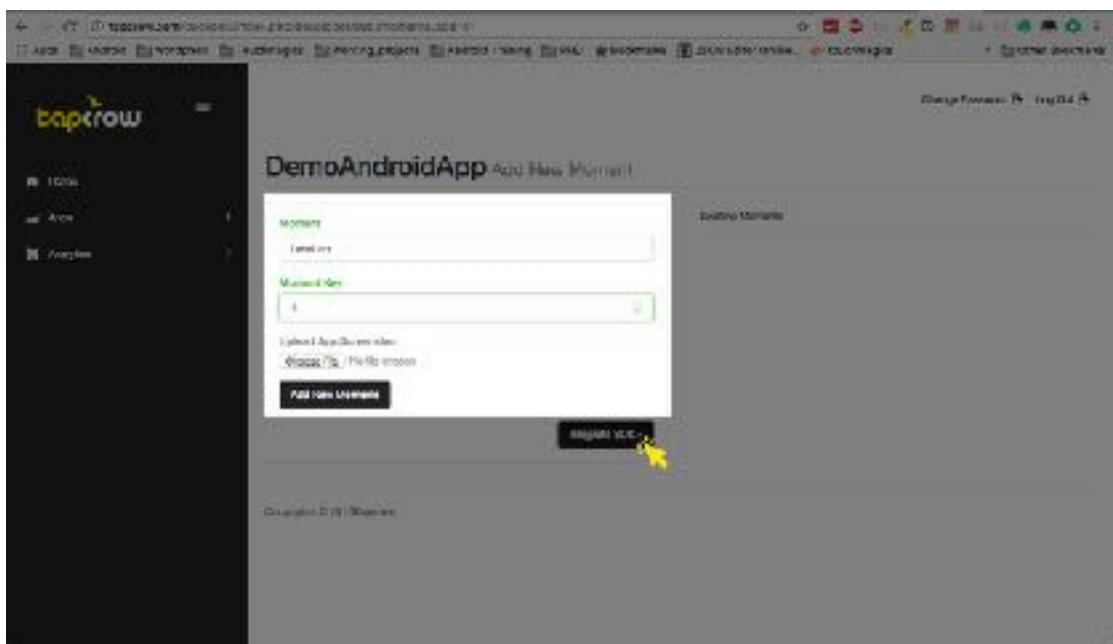

d) Click on Add new button from Side navigation

e) Register new app and click on add moment button

f) Add a moment and click on Integrate SDK Button

g) Note down your secret key and access token

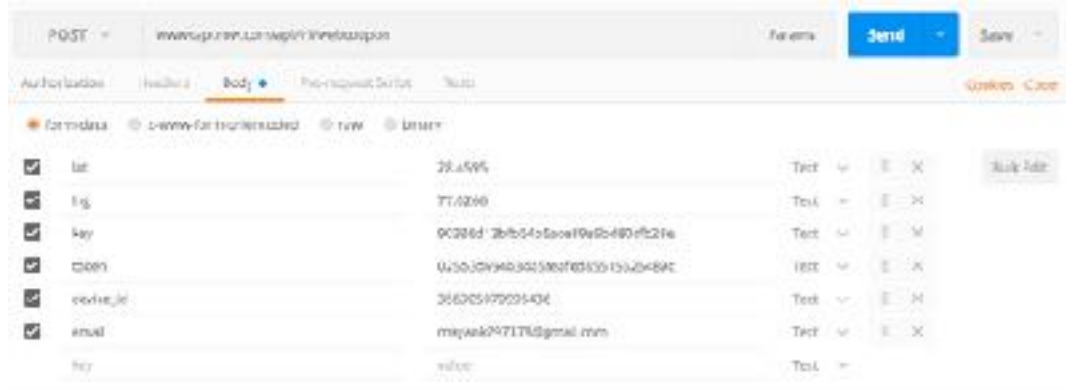

## Step 2:- Integration

### Mobile device integration

#### a) Create Coupon API: -

Request: - Send an http request as mentioned below

Field	Value	Type
lat	28.4595	Text
lng	77.0290	Text
key	0C28d12bfb5456ac09a0b480f52fe	Text
code	U430JQV9H0302580f083301502b49c	Text
device_id	356205170001404	Text
email	majank9717@gmail.com	Text

Response: - Get a JSON response in following format and use this data to show the coupon

```
1 {
2   "status": 1,
3   "code": 1
4   "city": null,
5   "company": {
6     "id": "124",
7     "name": "Free Mc Flurry/Salts Serve on any Medium/Large Meal",
8     "description": "World on Online Uhoh's",
9     "logo": "https://www.tapikrow.com/backend/web/uploads/uploads/1461782325.jpg",
10    "code": "532DESEFF",
11    "url": "https://www.tapikrow.com",
12    "expiry": "2017-05-16 04:08:00"
13  }
14 }
15 }
```

#### b) Pixel Tracking: -

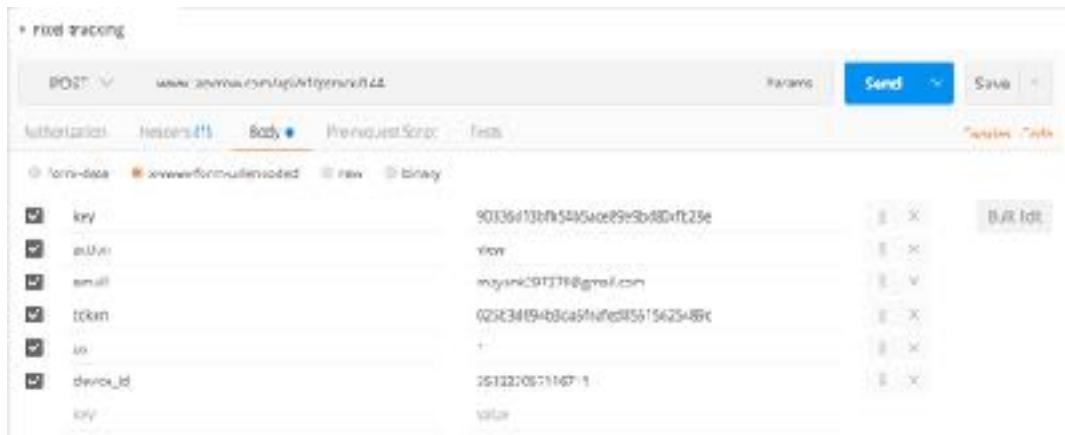

Request: - Send an http request as mention in the picture below. You can use appropriate predefined actions from the list below to track coupon analytics

View- when end user get the coupon

Cancel- when user dismiss the coupon dialog

Reject- When user reject the coupon manually

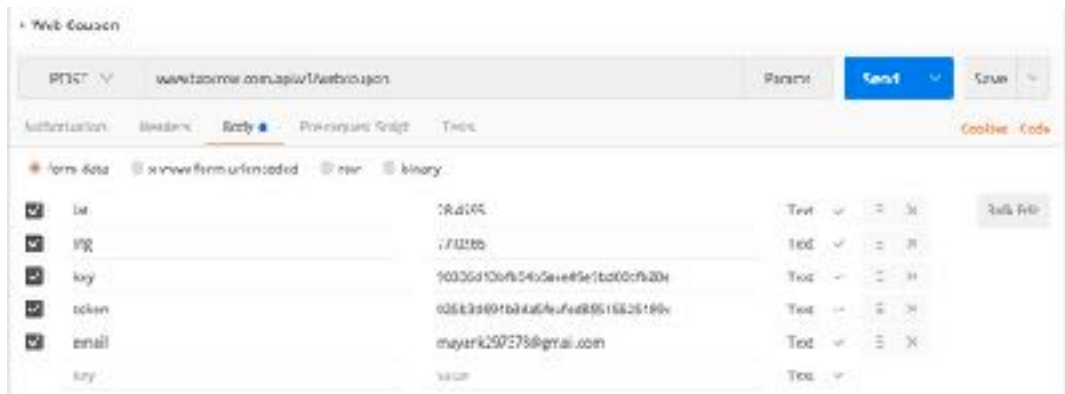

Redeem- When user redeem the coupon by providing his email ID.

## Web integration

a) Create Coupon API: -

Request: - Send an http request as mentioned below

Response: - Get a JSON response in following format and use this data to show the coupon

b) Pixel Tracking: -

Request: - Send an http request as mention in the picture below. You can use appropriate predefined actions from the list below to track coupon analytics

View- when end user get the coupon

Cancel- when user dismiss the coupon dialog  
Reject- When user reject the coupon manually  
Redeem- When user redeem the coupon by providing his email ID.

Note- For more details on how to use API, Please check the API documentation.
